

2022-23

Field Visit Dt. 03.09.2022

CAMPUS FLORA EXPOLARATION

Field Visit to Campus Flora Exploration organized by the Department of Botany for B.Sc I year students on Date: 03.09.2022

Objective:

The Department of Botany, [University Name], organized a field visit to explore the campus flora for B.Sc I year students on September 3, 2022. The objective of the visit was to familiarize students with the plant species present in the campus and to enhance their knowledge and understanding of botany in a practical setting.

Field Visit

The field visit began at 9:00 AM and lasted for approximately three hours. The students were divided into groups of five and each group was assigned a specific area of the campus to explore. The areas included various sections of the campus such as lawns, gardens, and green spaces. The students were encouraged to observe and record any plant species they encountered, including their morphology, habit, and distribution.

Observations and Findings:

During the field visit, the students observed a diverse range of plant species, including trees, shrubs, herbs, and grasses. They recorded observations on the physical characteristics of each plant species, including leaf shape, size, color, and texture; flower color, shape, and arrangement; and fruit type and color. The students also noted any distinctive features or adaptations of each plant species.

Out comes:

The campus flora exploration field visit was a valuable learning experience for B.Sc I year students. It provided an opportunity for students to engage with botanical concepts in a practical setting and to develop their observation and recording skills. The visit also fostered teamwork and communication among students as they worked together to identify and discuss plant species. The Department of Botany plans to organize similar field visits in the future to further enhance student learning experiences.
