Utilization of Solar energy, Wheeling to the Grid for green energy generation and installation of LED bulbs

S.V.A. Govt. College has taken a significant step towards environmental sustainability and cost reduction by installing a 20 kW grid-connected solar power system on its rooftop. This investment has yielded substantial benefits, most notably a significant reduction in our electricity bill from APSPDCL.

The solar panels have been efficiently harnessing solar energy, generating clean electricity that offsets a portion of our overall energy consumption. As a result, we have experienced a noticeable decrease in our electricity bills, saving the college valuable resources and contributing to a more sustainable future.

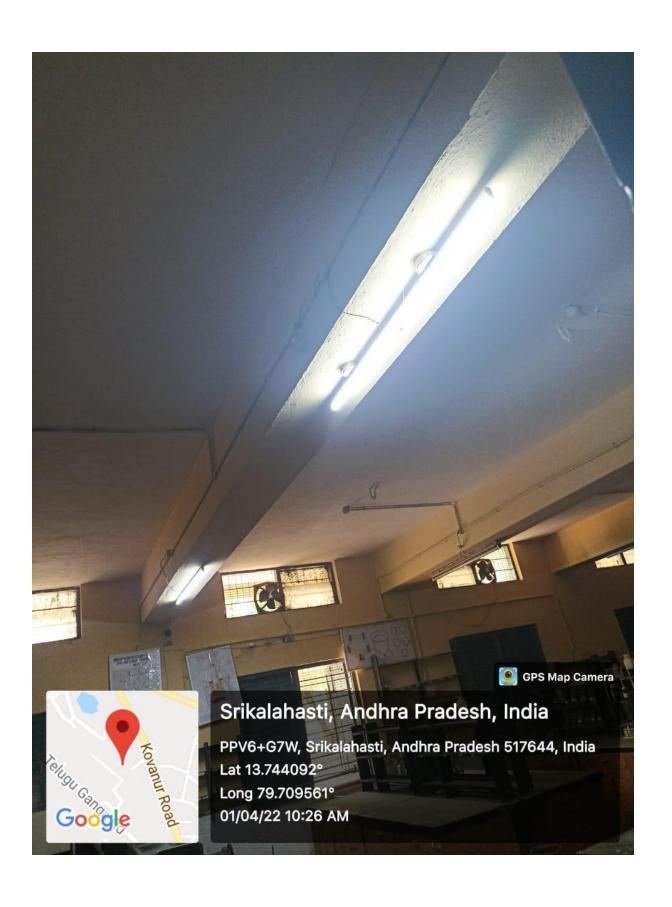

Additionally, the college has implemented energy-saving measures by installing LED bulbs throughout the campus. LED bulbs consume significantly less energy compared to traditional incandescent bulbs, further contributing to energy conservation and reduced electricity costs.

These initiatives not only benefit the environment but also provide economic advantages for the college. By harnessing solar energy and adopting energy-efficient practices, S.V.A. Govt. College is demonstrating its commitment to sustainability and setting a positive example for the community.
